

# The Insight Advantage: Non-Structural Renovation

By combining Builder's Risk coverage from highly rated insurers with proven risk control technology solutions, Insight Risk now offers even more valuable benefits to clients seeking insurance for non-structural renovation projects!

## Premium & Deductible Relief

Enjoy immediate savings for adopting technology solutions including pre-determined premium credits and significantly lower water damage deductibles.

## Available Limits

Up to \$250m available surplus lines capacity for non-combustible projects, and up to \$500m for special cases.

## Risk Control Technology

Select from solutions customized to your unique project and specifications, including environmental sensors, flow monitoring, shutoff valves, rate of rise detection, and a full line of site security solutions.

## White Glove Service

Save hundreds of administrative hours by engaging Insight Risk's White Glove Service team to manage risk control technology design, procurement, implementation, and system health and reliability support.

## Types Of Projects

- Office conversions
- Hospital expansions
- Business district revitalization projects
- Gut renovations

## Insight Advantage In Action

A former office building was being transformed into a cutting-edge life sciences facility—a process that carried significant risk of water damage.

By deploying IoT risk control technology, the project team successfully averted multiple potential losses, such as an opened stairwell roof hatch during freezing temperatures that could have caused freezing pipes and water intrusion.

The outcome? No delays due to damage—an essential win for this high-stakes remodeling project.

For non-structural renovations, Insight Risk delivers insurance and technology solutions that work together to reduce loss exposures.
